

CM
WHAT IS CLAIMED IS:

1. A connector bank for telecommunication systems, comprising: connecting elements for electrical connection to cable wires; and contact elements for electrical connection of the connecting elements with circuit tracks of a printed-circuit board, said contact elements being provided as a separate component including a contact pin and a plug connector member, said contact pin and said plug connector member being formed as one piece for connecting said connecting elements with the circuit tracks of the printed-circuit board.

2. A connector bank according to claim 1, wherein said connecting elements are formed of flat material elements and said plug connector member is formed as a fork-type contact.

sub a
3. A connector bank according to claim 1 or 2, wherein said contact pin and said plug connector member of each contact element are formed with plug shoulders.
